

This is to certify that

Jane Doe

Has completed

ACER's Core Skills Profile for Adults

assessment of:

Numeracy

Thank you for completing this assessment of your numeracy and maths skills. This information helps us identify if you might need any extra learning support during your training or studies.

Congratulations, your result indicates that you have solid numeracy and maths skills that will enable you to cope with many vocational training courses, although this will depend on the numeracy and maths demands of your course or work area. Your result shows that you can use a broad range of mathematical knowledge and skills to solve numeracy and maths problems. This means, for example, that you can measure and convert between different metric units. You can most likely use and calculate with different fractions, decimals and percentages, and can understand more complex graphs and data.

You are therefore likely to be able to cope with many of the mathematical demands of your training or workplace (although this will depend on the area of training or work). However, you could still benefit from further developing your numeracy and maths skills, to assist you in reaching your full potential in any future training, and also at home and work.

ACSF Level Estimate:
Working at ACSF Level 4 / Exit Level 3

Unique ID: id4
Completion Date: 17/01/2018
