Version: 2.10.043

The Informant Report Form of the Behavior Rating Inventory of Executive Function-Adult Version (BRIEF-A) was completed by a respondent familiar with Sample Client on 05/01/2013.

Validity

Before examining the BRIEF-A profile, it is essential to carefully consider the validity of the data provided. The inherent nature of rating scales brings potential bias to the scores. The first step is to examine the protocol for missing data. With a valid number of responses, the Negativity, Infrequency, and Inconsistency scales of the BRIEF-A provide additional validity information.

Missing Items

The respondent completed 75 of a possible 75 BRIEF-A items. For reference purposes, the summary table for each scale indicates the actual rating for each item. There are no missing responses in the protocol, providing a complete data set for interpretation.

Negativity

The Negativity scale measures the extent to which the respondent answered selected BRIEF-A items in an unusually negative manner. Items composing the Negativity scale are shown in the summary table below. A higher raw score on this scale indicates a greater degree of negativity, with less than 1% of respondents endorsing six or more of the items as Often in the clinical sample. *T* scores are not generated for this scale. The Negativity score of 1 is within the acceptable range, suggesting that the respondent's view of Sample Client is not overly negative and that the BRIEF-A protocol is likely to be valid.

Item	Content	Response
1	Has angry outbursts	Sometimes
8	<i>Remaining item content redacted for sample report</i>	Sometimes
19		Never
21		Sometimes
22		Sometimes
23		Sometimes
29		Never
36		Sometimes
39		Sometimes
40		Often

Infrequency

Scores on the Infrequency scale indicate the extent to which the respondent endorsed items in an atypical fashion relative to the combined normative and clinical samples. For example, marking Often to Item 10 (“I forget my name”) is highly unusual, even for adults with severe cognitive impairment. Items composing the Infrequency scale are shown in the summary table below. Because unusual responding on the five Infrequency items is not always indicated by the same extreme response (that is, Never or Often), the infrequent response also is shown for each item. *T* scores are not generated for the Infrequency scale. Instead, the number of items endorsed in an atypical, or an infrequent, manner is summed for a total score (i.e., the Infrequency score) and classified as “Acceptable” or as “Infrequent.” Less than 1% of respondents in the combined mixed clinical/healthy adult and normative samples had Infrequency scores of 3 or higher. The Infrequency score of 0 is within the Acceptable range, suggesting that there is no clear evidence of atypical responding.

Item	Content	Response (Infrequent Response)
10	Forgets his/her name	Never (Often)
27	<i>Remaining item content redacted for sample report</i>	Sometimes (Never)
38		Never (Often)
48		Sometimes (Never)
59		Sometimes (Never)

Inconsistency

Scores on the Inconsistency scale indicate the extent to which similar BRIEF-A items were endorsed in an inconsistent manner relative to the combined normative and mixed clinical/healthy adult samples. For example, a high Inconsistency score might be associated with marking Never in response to Item 33 (“Overreacts to small problems”) and simultaneously marking Often in response to Item 72 (“Gets upset quickly or easily over little things”). Item pairs composing the Inconsistency scale are shown in the summary table below. *T* scores are not generated for the Inconsistency scale. Instead, the raw difference scores for the 10 paired items are summed and the total difference score (i.e., the Inconsistency score) is used to classify the protocol as either “Acceptable” or “Inconsistent.” Less than 1% of respondents in the combined mixed clinical/healthy adult and normative samples had Inconsistency scores of 8 or higher. The Inconsistency score of 4 is within the Acceptable range, suggesting that responses were reasonably consistent.

#	Content 1	Score 1	#	Content 2	Score 2	Diff
2	Makes careless errors when completing tasks	2	41	<i>Remaining item content redacted for sample report</i>	3	1
25		3	49		3	0
28		2	42		2	0
33		2	72		2	0
34		2	63		2	0
44		2	61		2	0
46		2	56		1	1
52		3	75		2	1
60		3	74		3	0
64		2	70		3	1

End of Validity

BRIEF[®]-A Score Summary Table

Scale/Index	Raw score	T score	Percentile	90% CI
Inhibit	16	63	87	56 - 70
Shift	12	61	87	53 - 69
Emotional Control	19	56	71	52 - 60
Self-Monitor	11	54	70	47 - 61
Behavioral Regulation Index (BRI)	58	59	80	55 - 63
Initiate	16	60	87	53 - 67
Working Memory	17	68	94	62 - 74
Plan/Organize	22	65	91	59 - 71
Task Monitor	15	73	97	67 - 79
Organization of Materials	21	68	94	62 - 74
Metacognition Index (MI)	91	68	93	65 - 71
Global Executive Composite (GEC)	149	65	90	62 - 68

Validity scale	Raw score	Cumulative %	Protocol Classification
Negativity	1	0 - 98.5	Acceptable
Infrequency	0	0 - 93.3	Acceptable
Inconsistency	4	0 - 98.8	Acceptable
