# Retention, Progression and Participation Rates <br> in Tasmanian Schools, 2006-2015 

Statistics from the National Schools Statistics Collection (NSSC) show improvement in the retention of students in Tasmanian schools past Year 10, as shown in the trends cited below.

Enrolments and rates are reported by school sector (Government, Catholic and Independent). The purpose is not to compare progression or retention rates, as each sector has its own arrangements for senior secondary schooling (Years 11 and 12). These differences are related to the provision of Years 11 and 12, and are highlighted only when the statistics indicate a shift between sectors.

## Main points

## Retention (Year 7-12)

Between 2006 and 2015, the Year 7-12 apparent retention rate in Tasmania increased from 64.8\% to $71.7 \%$, based on full-time enrolments.

In Government schools, the rate increased from $63.2 \%$ in 2006 to $74.1 \%$ in 2015. The rate was relatively stable in Catholic schools ( $60.4 \%$ in 2015), and there was a decrease in Independent schools from 83.8\% in 2006 to 77.4\% in 2015.

The Year 7-12 apparent retention rate for full-time students increased dramatically between 2009 and 2010 in Government schools (61.3\% to 72.9\%) and in all schools (63.8\% to 71.0\%) in Tasmania. At the same time, the rate for Independent schools decreased (85.4\% to 73.9\%).

The fluctuations between 2009 and 2010 reflect the change in the structure of post-Year 10 education in Tasmania, when four of eight Government colleges, along with TAFE Tasmania, were restructured and brought under the authority of the Tasmanian Academy and the Tasmanian Polytechnic. The four remaining colleges continued under the authority of the Tasmanian Department of Education. As a result of these changes, data for students who were in scope were collected by different authorities and had to be collated before submission to the National Schools Statistics Collection (NSSC). Fluctuations in enrolments are seen in each subsequent year to 2015 (the most recent collection), as noted in in Schools Australia (ABS cat. no. 4221.0). ${ }^{\text {i }}$

## Progression (Year 10-11)

Overall, Year 10-11 progression rates for full-time students increased from 77.1\% in 2006 to $85.4 \%$ in 2015. The progression rate increased from $76.2 \%$ in 2010 to $80.8 \%$ in 2011 , and to $85.1 \%$ in 2012. These later shifts are more likely a delayed result of the changes in the structure of post-Year 10 education and the changes in enumeration rules for the NSSC.

When the full-time equivalence of part-time students is included in the calculation of progression rates, the Year 10-11 progression rate increased from 79.8\% in 2010 to $88.4 \%$ in 2011 and $92.3 \%$ in 2012. It was during this period that there were large enrolments of part-time students in Years 11 and 12, many of whom were 21 years and older.

In some years for Government schools, the Year 10-11 progression rate was greater than $100 \%$, indicating that Government senior secondary schools were either gaining students from nonGovernment schools or enrolling students who had returned to school after a period of non-enrolment.

Compared to other jurisdictions in 2006, Tasmania had the lowest Year 10-11 apparent progression rate ( $75.0 \%$ ) in Australia. The overall rate for Australia that year was $87.4 \%$. From 2006 to 2010, the rate for Tasmania remained close to $75 \%$ while it increased in most other jurisdictions; the Australian rate for 2010 was $89.3 \%$. By 2015, the Year 10-11 apparent progression rate for Tasmania, as reported in the NSSC ${ }^{1}$, was $84.7 \%$ and the national rate was $91.6 \%$, representing a decrease in the difference between Tasmania and the Australian rates of close to one-half, from a 12.4 percentage point difference to a 6.9 percentage point difference.

## Participation (15-to-19 Year Olds)

By comparison with other jurisdictions, Tasmania does well in the percentage of young people aged $15-$ to-19 years who are enrolled at a school, either full-time or part-time. The Australian Capital Territory has the highest rate, at $73.3 \%$ enrolled either full-time or part-time. Tasmania, at $62.4 \%$, has the fourth highest rate in Australia, and is above the national rate of $58.8 \%$.

The Tasmanian rate has been similar to the rates for South Australia and Victoria from 2010 to 2015, with two years, 2011 and 2012, when the Tasmania rate was higher. This period coincides with the period to which the ABS refers in discussing the fluctuations in relation to enrolments in the State (see endnote).

The rate is likely to be at its level relative to other jurisdictions as a result of current entry-age legislation, which is under review. Students in Tasmania are approximately six months older than students in other jurisdictions, because the school entry age in Tasmania is higher than it is in other jurisdictions. This is seen in the NAPLAN reports, with the age differences noted at each tested year level. For PISA, a greater proportion of sampled students in Tasmania are in Year 9 compared other jurisdictions.

Full-time and Part-time Students

## Notes

${ }^{i}$ Explanatory notes from Schools Australia (ABS cat. No. 4221.0):
(2009) Tasmanian education underwent a significant restructure of post-year 10 education in 2009. This reform, entitled Tasmania Tomorrow, created three new statutory organisations (called the Tasmanian Academy, the Tasmanian Polytechnic and the Tasmanian Skills Institute) from the merger of state government colleges (years 11 and 12) and TAFE Tasmania. In 2009 four of Tasmania's eight government colleges, along with TAFE Tasmania, were restructured and brought under the authority of the Tasmanian Academy and the Tasmanian Polytechnic. The four remaining colleges continued under the authority of the Tasmanian Department of Education (TDE) and will transition to the new structure by 2012. Census data from the Tasmanian Polytechnic and the Tasmanian Academy were combined with TDE data to provide the NSSC submission for Tasmanian government schools. TDE undertook a process of data collection, cleaning, reconciliation and application of scope to ensure that the data provided to the NSSC fully complied with collection definitions.
(2015) In recent years, Tasmania has alternated between a single and multiple entity college structure. This has impacted on the number of students as these structural changes have seen some Year 11 and 12 students change classification between school and the vocational education and training sector and hence move in and out of scope of the National School Statistics Collection.

[^0]:    ${ }^{1}$ The Australian apparent progression rate includes Tasmanian students. Apparent retention rates, as calculated for the NSSC, 'include both full-time and part-time students and are adjusted to factor in changes in the population' (ABS, cat. No. 4221.0, Table 65a, 2015, Explanatory Notes).
