SAMPLE COLLEGE

SURVEY OF STUDENT ATTITUDES TO SCHOOL USING THE ACER SCHOOL LIFE QUESTIONNAIRE

The Australian Council for Educational Research

19 Prospect Hill Road
Camberwell 3124
What students think of their schools is a frequent topic of conversation among students themselves, among students and their families and among teachers. “How’s school” is the start of many discussions and evokes a range of responses. Beyond a role as a conversation starter based on a shared experience there are several reasons why students’ views of, and attitudes to, their schools are important. Firstly, students spend a significant part of their lives in schools and what they experience in that time is of importance in itself. Secondly, students’ attitudes to school are important because they relate to (but are not necessarily the same as) many affective and enduring purposes of schooling. Thirdly, attitudes to school are important because they are presumed to influence student learning.

PURPOSE

The ACER School Life Questionnaire is intended for use in surveys of schools, for school reviews and school evaluations. It was developed to assist in the examination of outcomes of schooling that are different from the more usual school outcome measures, such as student achievement. It would enable an examination of important outcomes such as attitudes towards school in general, towards learning, towards teachers and towards other students. Information on these kinds of ‘affective’ variables can complement the more usual measures of outcomes and be useful in a variety of contexts.

The instrument enables users to collect and access information when:

- looking at the social environments of schools
- thinking about the aims of schools and particular emphases and ethos
- exploring the extent to which the aims of a school are recognised (and accepted) by students
- examining the organisational structures of a school and their impact on student experiences
- making judgements about the (effectiveness of) policies concerned with curriculum, teaching practices, assessment, programs and organisation
- identifying pointers to action or to areas of concern at the school or subunit level

These issues are ones which schools are having to address more directly than in earlier times. As accountability becomes more explicitly required by school communities and by society in general, effectiveness and innovation and change need to be supplied and monitored. The School Life Questionnaire can assist in the decisions to be made by schools.

SCOPE AND CONTENT

The ACER School Life Questionnaire has been used in a series of studies in different contexts over more than a decade. The results of these studies have enabled the instrument to be developed and its properties to be established through replicated results. The School Life questionnaire was initially developed for use in secondary schools. Its form for secondary schools consists of 40 statements about school to which students are asked to indicate their level of agreement on a four-point Likert scale from strongly agree to strongly disagree. The items encompass a number of different aspects of school life and form clusters or scales. It distinguishes general feelings of well being (positive affect), general negative feelings (negative affect), and feelings related to specific aspects of school life.
The general aspects of school life are:

- **General Satisfaction** (or Positive Affect) reflects favourable feelings about school as whole. A typical item is *My school is a place where I really like to go each day.*

- **Negative Affect** which refers to negative feelings about school and is typified by an item such as *My school is a place where I feel worried.*

The five specific aspects of schooling embodied are:

- **Teachers** which refers to a feeling about the adequacy of the interaction between teachers and students. A typical item is *My school is a place where teachers take a personal interest in helping me with my school work.*

- **Relevance** (previously called opportunity) which represents a belief in the relevance of schooling for the future. A typical item is *My school is a place where the things I am taught are worthwhile learning.*

- **Success** (sometimes called achievement) which reflects a sense of confidence in one's ability to be successful in school work. A typical item is *My school is a place where I always achieve a satisfactory standard in my work.*

- **Status** which indicates the relative degree of prestige accorded to the individual by significant others within the school. A typical item is *My school is a place where I know people think a lot of me.*

- **Social Integration** (previously called identity) which is concerned with a sense of learning about other people and getting along with other people. A typical item is *My school is a place where I get on well with other students in my class.*

**REPORTING ITEM RESPONSES**

The response key for each item is a four-point Likert scale and student responses are scored from 1 for definitely disagree to 4 for definitely agree. One way of reporting student responses is to record the percentages of students responding in each of these categories to each item. This provides a complete picture of the data provided by students.

However, it is often important to summarise student responses as part of a process of representing and analysing data. One method of summarising students’ responses is in terms of the percentage agreement (combining percentage “Mostly agree” and percentage “Definitely agree”) with an item. An alternative is to report the mean response, on a scale from one to four, for each item. For example, on the item “*my school is a place where I really get involved in my school work*” the following responses were obtained from Year 8 at Sample College:

<table>
<thead>
<tr>
<th>Response</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>definitely disagree</td>
<td>0.0%</td>
</tr>
<tr>
<td>mostly disagree</td>
<td>4.2%</td>
</tr>
<tr>
<td>mostly agree</td>
<td>59.7%</td>
</tr>
<tr>
<td>definitely agree</td>
<td>36.1%</td>
</tr>
</tbody>
</table>

This could be summarised as:

* a percentage agreement of 95.8 per cent [= 59.7 + 36.1], or as
* a mean rating of 3.32 [= 0.0 x 1 + 0.042 x 2 + 0.597 x 3 + 0.361 x 4].
The percentage agreement is probably more readily interpreted although the mean better represents the information available.

**DATA – THE SURVEY**

The Questionnaires were administered to a total of 361 students from Sample College, 65 in Year 7, 72 in Year 8, 82 in Year 9, 78 in Year 10 and 64 students in Year 11 at the Sample College in 2007. Questionnaires were then subjected to further analysis. Table 1 displays student population according to year level and gender.

</tbody>
</table>

**OVERALL RESULTS FOR THE YEAR**

**Student Responses to Each Item**

Detailed results on all items of the Questionnaire for Year 7 to Year 11 are shown in the tables in Appendix A.

**Summary Statistics: Average Percentage Agreement**

One statistic used to summarise the responses to a group of items that make up a scale is the average percentage agreement. For example, on the five items on the *General Satisfaction* scale, the percentage agreement figures were 91.4, 79.4, 77.2, 65.4 and 63.9. These could be represented as an average percentage agreement of 75.5 percent on the *General Satisfaction* items (See
Appendix A Table A1). A summary score such as this can provide a more convenient means of interpretation.

The average percentage agreement scores for the General Satisfaction item and for the other six scales across the year levels are shown in Table 2 and diagrammatically in Figure 1.

<td>20.4</td>
</tr>
</tbody>
</table>

**Comparison of Years 7 to Year 11**

Average percentage agreement values shown above indicate the attitude of students according to each year level. Year 7 students most favourable views on General Satisfaction, Teachers, Relevance, Success and Social Integration. Year 8 students scored highest on items about Status. Also Year 7 recorded the least favourable views on items about Negative Affect. In contrast, the three higher year level groups recorded more favourable view on items about Negative Affect.

![Students' Views on Aspects of School Life – Students at Sample College](image)

**Figure 1: School Life Indicators for All, Years 7 to 11 students (Summary Scores)**

**DIFFERENCES IN SCHOOL LIFE RESPONSES BETWEEN BOYS AND GIRLS**

One of the more consistent findings from surveys of the ACER School Life Questionnaire is that girls record more favourable views of school life than do boys. This pattern is not evident in this survey data for the Sample School. Table 3 shows that girls recorded more favourable views on items about Teachers, Success and Social Integration and boys recorded more favourable views about General Satisfaction, Relevance and Status. Girls revealed more
negative feelings about school life (negative affect) than boys. It should be noted that the differences in average agreement from the two genders is generally quite small. More detail on individual items in the survey is provided in Tables A6, A7 and A8 of Appendix A.

SCALE SCORES

An alternative approach to summarising response data is to calculate scale scores for each student. Scale scores can be obtained summing the item scores for the items constituting a defined group or cluster. Combining related items into scales has a number of advantages, one of which is parsimony. If a student ticked Definitely Agree for Item 2, Definitely Agree for item 8, Mostly Agree for item 9, Mostly Disagree for item 31 and Mostly Disagree for item 39, then their scale score for general satisfaction would be 15 [= 4+4+3+2+2]. This can be interpreted in relation to the possible range of scores from 5 to 20 on the scale as indicating overall agreement with the items. It can then be used in a range of statistical analyses which explore the association of general satisfaction with school to other factors. In addition to calculating scale means for individuals mean scale scores for groups of students can be calculated and used to compare year levels or the effects of participation in particular programs. An advantage of using scale scores for analyses is that they are more amenable to a range of statistical investigations than are data on percentage agreement with particular items. There are standard methods for calculating reliabilities or internal consistencies of scale scores. Scale scores (shown in Table 4 for all students and by gender) have not been used widely throughout this report because they are not so readily interpreted as the percentage agreement measures.

![Figure 2: School Life Indicators for all students nationwide (Summary Scores)](chart)

RESEARCH USING THE SCHOOL LIFE QUESTIONNAIRE

The ACER School Life Questionnaire for secondary schools has been used in a number of research studies and evaluations. Three of the larger studies were:

- A cross-sectional study of some 8,500 students in Years 7 through 12 in a sample of 50 government secondary schools in Victoria in 1985 (Ainley, Miller & Reed, 1986).
- A study which followed a cohort of some 3,000 young people from Year 9 students in 1987 to Year 12 in 1990, from a representative sample of 22 New South Wales government secondary schools (Ainley & Sheret, 1992).
- A longitudinal study of students proceeding through different types of curricula in Year 12 in Victoria (Batten, 1989)
In general there appear to be only small associations between school life scales and aspects of student background such as socioeconomic status and non-English speaking background. Almost all of the studies on the quality of school life in both primary and secondary schools in Australia report no association between the socioeconomic background of students and school life. Students of non-English-speaking background in secondary schools tend to score higher on several scales but the effect is not large.

A number of studies have reported an association between scores on various school life scales and “deep” approaches to learning. There is little association between achievement test scores and school life scale scores, except for the scale concerned with success. However, it has been suggested that school life scores on some scales are associated with achievement growth (a measure of the change in achievement over a period of time).

**Comparisons with results from previous testing years**

The tables in Appendix B compare the responses of students in Year 9 and 10 with students from the previous year. The responses of Year 9 students in 2007 are compared to the responses of Year 9 and Year 10 students from 2006. Equally, the responses of Year 10 students in 2007 are compared to the responses of Year 9 and Year 10 students from 2006.

**Comparisons with Items from a National Survey of Year 9**

Table C1 in Appendix C provides comparisons of results for some items between Sample College Year 9 and 10 students and a nationally representative sample of 1995 Year 9 students that formed part of the Longitudinal Surveys of Australian Youth (LSAY). Comparisons are possible for only some of the items of the *School Life Questionnaire* because a short form of the Questionnaire was used in the LSAY survey (Marks, G., 1998).

Note: The percentages indicate the proportion of respondents who mostly agree, agree, disagree, and strongly disagree with each statement.
APPENDIX C

Comparison with national sample YEAR 9

Table C1 provides a comparison between the responses of Sample College Year 7 to Year 11 students and a national sample of Year 9 students (approximately 13,000) that formed part of the Longitudinal Surveys of Australian Youth (LSAY).

The table shows:

On General Satisfaction with school life – Overall Sample College students at all year levels responded more favourably overall on general satisfaction than those in the Year 9 national sample. The only exception is the item “I like learning” where the Y9 group recorded a % agreement lower than the national sample.

On the Teacher items – Sample College students responded more favourably overall than students in the Year 9 national sample. In particular, on the item “Teachers take a personal interest”, the % agreement is more than 20% or more higher than the national sample at some year levels. The Year 9 group recorded lower % agreement than the national sample on items like “Teachers give me the marks I deserve” and “teachers are fair and just”

On the Relevance items – On the whole, Sample College students’ scores were also higher than the national sample. At some year levels and for some items, the % agreement is lower than that of the national sample., e.g. on the item ”the work is a good preparation for the future” the %s agreement from Y9 and Y11 are less than that of the national sample.

On the Success items – Sample College students’ overall scores were also higher than the national sample. Item “I know how to cope with the work”, and “I can do well enough to be successful” are exceptions at some year levels.
